

# Deliverables:

- Rent Online / quote\_form.html
  - Page must be a functional order form
  - Data to Collect/Store
    - Name of Customer
    - Address of Service
      - Zip Code
        - This is important to collect as the ZIP of the user determines price of delivery
    - Date of Service
    - Time of Service
    - Length of Rental Period
    - Size of Dumpster
    - Quantity of Dumpsters
    - Phone Number
    - Email Address
- Payment form using Stripe
  - I am not familiar with the Stripe API, so there is not much information I can provide on the specifics of this task.
  - As long as Stripe correctly lists the price that was specified in the order form, can correctly process payments, and brings the user to the landing page after payment is complete, this step can be considered finished.
- Landing Page
  - You will need to create a landing page that will redirect users to index.html after a period of 5 seconds.
  - This page should contain the time and date of the users order, as well as a thank you message to the customer for renting our dumpsters
- Confirmation Emails
  - After a purchase has been completed and verified, an email should be sent to the customer informing them of their purchase.
    - This email should include
      - Contents of the Order
      - Date of Service
      - Time of Service

- Receipt of the transaction
- A thank you for renting with The Dumpster Crew
  - If you need help writing that, I can take care of the contents of the email. The automation of adding the order's contents, time, date and amount paid are the important parts.
- Another email should also be sent out to [barry@cbusdumpsters.com](mailto:barry@cbusdumpsters.com)
  - This email should include the same contents as the previous email, but does not need to include the thank you message.
